Port Artur

Background

The Port Artur Shopping Center in the center of Pärnu is a modern and popular shopping haven that offers something for all members of family. More than 90 different companies offer their goods and services in the two buildings of Port Artur.

Solutions

This shopping mall is a newly constructed shopping mall. It requires high definition surveillance system to secure the building. GKB proposed GKB D3822 (1.3MP H.264 Box camera) for inside shopping hallway, GKB D6122 (1.3MP Outdoor H.264 Bullet IR) for outdoor purpose, and GKB DZ260 at parking lot to overview the shopping mall and the parking lot.

Long recording duration and high security of recorded video data is a must; therefore, GKB proposed its 8HDD bay standalone NVR, which is able to record up to 64 * SXGA @ 15fps video resolutions with RAID 5. The standalone NVR can also equip external iSCSI storage for additional storage space if it is needed.

Benefits

Using GKB Diplomat solution is very economical. The free NVR10 recording software allows end users to achieve high definition surveillance solution with minimum investment in recording. The ability of NVR10 is able to record up to 64CH network cameras @ SXGA resolution; as a result, the owner of Port Artur will not need to invest any license fees or change the structure in the future if more cameras need to be installed. The standalone NVR also provides a reliable recording platform to maintain the security of the recorded video data for future investigation.
